OMINUS™ FPV

238 mm First Person View Quad

See flight from a new point of view!

With the Ominus FPV, you not only see your flight through a Wi-Fi®-enabled digital camera — you can also operate it with your own smartphone or other mobile device (not included). All it takes is the FPVCam app, which you can download free from Google Play™ or the Apple App Store℠

Download the app, put your smartphone in the holder and you're set to shoot videos and photos from a first-person view of flight – and download it directly to your smartphone or store it on the onboard memory card. Whether you're starting up or trading up, the ready-to-fly Ominus FPV is the quad to buy.
